

ALZHEIMER'S OR AGING? HOW CAN I TELL?

Gretchen Reynolds, Ph.D., clinical neuropsychologist at Brigham and Women's Hospital will discuss the difference between normal age-related memory changes and behavior that is cause for concern.

Dr. Reynolds will cover:

- How the brain changes with age
- How dementia-related changes may occur in the brain for years prior to any symptoms
- The symptoms and stages of Alzheimer's disease
- How research participation can help advance science

A current research study participant will join Dr. Reynolds to discuss their experience and answer questions.

**Friday,
October
21st**

12 - 1 PM EST

Via Zoom
